Dr. **Henk Veeze** is the Founder of Diabeter, a national clinic for diabetes in children and young adults, as a non-profit organisation in The Netherlands. The focus of Diabeter is the added value for patients by concentrating expertise.

Together with Henk - Jan Aanstoot, he now runs 2 such clinics, the first In Rotterdam (since 2006) and a new facility, which opened in summer 2008 in Deventer (east part of The Netherlands).

He has a special interest improving care in diabetes by applying new technologies (now 10yr complete multidisciplinary electronic health record with clinic expert units as protocol guidance and online monitoring of outcome parameters; insulin pump and (semi-) closed loop systems). From previous research he maintained a strong interest in cystic fibrosis related diabetes.

Henk is married, and has 3 children.
